Note: Only the most relevant project evidence is intended for this document. The screenshots supplied during project development are not all required; the selected evidence points below focus on the data model, core automation, Apex processing, testing, and reporting.

1 Project Overview

WhatsNext Vision Motors is a Salesforce CRM solution designed to streamline vehicle sales and dealership operations. The project brings vehicle, dealer, customer, order, test-drive, and service information into one Salesforce platform and uses automation to reduce manual work.

The implementation combines custom objects, lookup relationships, a dedicated Lightning application, record-triggered flows, scheduled automation, Apex triggers, a trigger-handler class, Batch Apex, Scheduled Apex, email actions, reports, and a dashboard.

Main Business Outcomes

- Automatically assign a dealer to a new vehicle order based on the customer's location.
- Check vehicle stock before confirming an order.
- Automatically confirm an order when stock is available.
- Prevent confirmation when the selected vehicle is out of stock.

Figure 9. Out-of-Stock Vehicle Order Handling

This screenshot demonstrates the out-of-stock scenario in the Vehicle Order process. The order record for the Sierra vehicle is shown with its status set to Canceled, supporting the project's handling of unavailable vehicle stock.

- Reduce vehicle stock by one when an order is confirmed.
- Process eligible pending orders using Batch Apex when stock becomes available.
- Send an order confirmation email to the customer.
- Send a scheduled test-drive reminder one day before the appointment.
- Provide reports and a dashboard for inventory, orders, test drives, and service requests.

Technology Used

Area	Salesforce Feature
Data	Custom objects, custom fields, lookup relationships
Automation	Record-triggered flows and scheduled paths
Development	Apex trigger, trigger handler, Batch Apex, Scheduled Apex
Communication	Salesforce Send Email action
Analytics	Reports and Dashboard

Deployment	Salesforce CLI and Metadata API
Version Control	Git and GitHub

2 Objectives and Implementation Scope

2.1 Project Objectives

- Create a structured Salesforce data model for vehicles, dealers, customers, orders, test drives, and service requests.
- Maintain accurate vehicle stock and order status information.
- Automate dealer assignment for newly created vehicle orders.
- Automate order confirmation based on vehicle stock availability.
- Use Apex to enforce stock validation and update inventory safely.
- Provide scheduled processing for pending vehicle orders.
- Automate customer communication for order confirmation and test-drive reminders.
- Provide management visibility through Salesforce reports and dashboard.

2.2 Current Implementation Scope

Area	Included Implementation	Review Evidence
Data Model	Six custom objects with fields and lookup relationships	Object Manager / Schema or object field screens
Lightning App	WhatsNext Vision Motors app with project navigation	Lightning App navigation
Automation	Dealer assignment, order confirmation, test-drive reminder	Flow Builder canvases
Development	Trigger, handler, batch, and scheduler	Apex Classes / Trigger
Testing	Order, stock, email, reminder, and batch scenarios	Records / Apex Jobs / email evidence
Analytics	Inventory, order, pending order, test drive, service reports	Reports / Dashboard
Deployment	Metadata deployment using Salesforce CLI	CLI deployment result / Git repository

3 Requirement Analysis and Data Model

The data model separates master data from transaction and operational data. Vehicle, dealer, and customer records store reusable business information. Vehicle Orders capture purchases, while Test Drives and Service Requests support customer-facing activities.

Custom Object	Key Fields	Business Purpose
Vehicle__c	Vehicle Name, Vehicle Model, Stock Quantity, Price, Dealer, Status	Stores vehicle catalogue and inventory information.
Vehicle_Dealer__c	Dealer Name, Dealer Location, Dealer Code, Phone, Email	Stores authorized dealer information.
Vehicle_Customer__c	Customer Name, Email, Phone, Address, Preferred Vehicle Type	Stores customer information.
Vehicle_Order__c	Order Number, Customer, Vehicle, Order Date, Status, Dealer	Tracks vehicle purchases and order status.
Vehicle_Test_Drive__c	Test Drive Number, Customer, Vehicle, Test Drive Date, Status	Manages test-drive bookings.
Vehicle_Service_Request__c	Service Request Number, Customer, Vehicle, Service Date, Issue Description, Status	Manages service requests.

3.1 Relationships and Important Fields

Child Object	Relationship	Related Object	Purpose
Vehicle Order	Lookup	Vehicle Customer	Links an order with the customer.
Vehicle Order	Lookup	Vehicle	Identifies the ordered vehicle.
Vehicle Order	Lookup	Vehicle Dealer	Stores the dealer assigned to the order.
Vehicle	Lookup	Vehicle Dealer	Associates a vehicle with a dealer.
Vehicle Test Drive	Lookup	Vehicle Customer	Links the test drive to the customer.
Vehicle Test Drive	Lookup	Vehicle	Identifies the vehicle for the test drive.
Vehicle Service Request	Lookup	Vehicle Customer	Links the service request to the customer.
Vehicle Service Request	Lookup	Vehicle	Identifies the serviced vehicle.

3.2 Key Picklist Values

Object	Field	Values
Vehicle	Vehicle Model	Sedan, SUV, EV, Hatchback, Luxury
Vehicle	Status	Available, Out of Stock, Discontinued
Vehicle Order	Status	Pending, Confirmed, Delivered, Canceled
Vehicle Test Drive	Status	Scheduled, Completed, Canceled
Service Request	Status	Requested, In Progress, Completed

3.3 Salesforce Object and Field Configuration

The following screenshots provide direct evidence of the six custom objects and their principal fields and lookup relationships configured in Salesforce Object Manager. They complement the data-model tables above and document the implemented Salesforce configuration.

4 Salesforce Configuration and Security

A dedicated Lightning application named WhatsNext Vision Motors was configured to provide a centralized navigation workspace for the project. The application includes the main business objects and analytics.

4.1 Lightning Application Navigation

- Vehicles
- Vehicle Dealers
- Vehicle Customers
- Vehicle Orders
- Vehicle Test Drives
- Vehicle Service Requests
- Reports
- Dashboards

4.2 Security Configuration

The project uses Salesforce standard security mechanisms including profiles, object permissions, field-level security, and Permission Sets. Development and configuration were performed primarily using the System Administrator profile. Permission Sets can be used where additional object or field access is required.

Security Item	Configuration	Purpose
Profile	System Administrator for project configuration	Provides administrative access during development.
Permission Set	Additional object/field permissions where required	Extends access without changing the base profile.
Object Permissions	Controlled for project custom objects	Controls create, read, edit, and delete access.
Field-Level Security	Applied to project fields as required	Controls visibility and editability of fields.

EVIDENCE 1 – WhatsNext Vision Motors Lightning App and project navigation

Figure 1. WhatsNext Vision Motors Lightning App and project navigation

5 Data Quality and Business Rules

The project uses Flow and Apex to enforce important business rules. The central rule is that a vehicle order must not be confirmed when the selected vehicle has no available stock.

5.1 Vehicle Stock Rule

Condition	System Behaviour
Stock Quantity > 0	Order can be confirmed.
Stock Quantity = 0	Order remains Pending or confirmation is blocked.
Stock Quantity < 0	Confirmation is not permitted.

5.2 Confirmation Rule

1. A Vehicle Order is created with Pending status.
2. The order flow retrieves the selected Vehicle.
3. The flow checks Stock Quantity.
4. If Stock Quantity is greater than zero, the order status is updated to Confirmed.
5. The customer record is retrieved.
6. A confirmation email is sent.
7. The Apex Trigger detects the new confirmation and reduces vehicle stock by one.

5.3 Out-of-Stock Validation

The Apex Trigger Handler validates the selected vehicle before an order is confirmed. When the stock quantity is zero or null, the transaction is blocked with the message:

"This vehicle is out of stock. Order cannot be confirmed."

5.4 Stock Deduction

When an order changes from Pending to Confirmed:

New Stock Quantity = Previous Stock Quantity – 1

6 Process Automation and Email Communication

6.1 Auto Assign Dealer Flow

This record-triggered flow runs when a Vehicle Order is created. It retrieves the customer, finds a matching dealer using the customer's location, and updates the order with the dealer.

Vehicle Order Created → Get Customer Information → Get Nearest Dealer → Assign Dealer to Order → End

EVIDENCE 2 – Auto Assign Dealer record-triggered flow

Figure 2. Auto Assign Dealer record-triggered flow

6.2 Vehicle Order Confirmation Flow

The order flow checks the selected vehicle's stock. A Decision element uses the condition Stock Quantity greater than zero. The Stock Available path confirms the order, retrieves the customer, and sends the confirmation email.

Get Vehicle → Check Vehicle Stock → Stock Available → Confirm Order → Get Customer → Send Email

EVIDENCE 3 – Vehicle Order confirmation flow

Figure 3. Vehicle Order confirmation flow

Figure 3A. Confirmed Vehicle Order record showing the successful order confirmation and dealer assignment.

6.3 Test Drive Reminder Flow

The Test Drive flow contains a scheduled path that runs one day before the scheduled test drive. It retrieves customer information and sends a reminder email to the customer's email address.

Test Drive Scheduled → Reminder Before Test Drive → Get Customer → Send Test Drive Reminder

EVIDENCE 4 – Scheduled test-drive reminder flow

Figure 4. Scheduled test-drive reminder flow

Figure 4A. Test-drive reminder email received by the customer.

6.4 Email Communication

Email	Trigger	Purpose
Order Confirmation	Order becomes Confirmed	Confirms the successful vehicle reservation.
Test Drive Reminder	One day before scheduled test drive	Reminds the customer about the appointment.

7 Apex Trigger and Handler Logic

Apex is used where transaction-level validation and inventory updates are required. The VehicleOrderTrigger delegates business logic to VehicleOrderTriggerHandler so that the trigger remains small and the rules can be maintained in one class.

7.1 VehicleOrderTrigger

The trigger executes for:

- Before Insert
- Before Update
- After Insert
- After Update

The trigger calls:

VehicleOrderTriggerHandler.handleTrigger(...)

7.2 Trigger Handler Responsibilities

Method	Event	Responsibility
preventOrderIfOutOfStock	Before insert/update	Prevents an order from becoming Confirmed when stock is unavailable.
updateStockOnOrderConfirmation	After insert/update	Reduces vehicle stock when an order becomes Confirmed.

7.3 Bulkification

- Vehicle IDs are collected in a Set.
- Vehicle records are queried once using a Map.
- SOQL queries are kept outside record loops.
- Vehicle updates are collected in a List.
- DML is performed outside the loop.

7.4 Important Status Transition

New Status = Confirmed AND Old Status ≠ Confirmed

This prevents stock from being deducted repeatedly when an already confirmed order is edited.

8 Batch Apex and Scheduled Processing

8.1 VehicleOrderBatch

VehicleOrderBatch implements Database.Batchable<SObject>. It identifies Vehicle Orders with Pending status and a related vehicle. For each batch, it retrieves the related vehicles and confirms orders when stock is available.

Method	Responsibility	Expected Result
start	Queries Pending Vehicle Orders with a Vehicle.	Pending orders are selected for processing.
execute	Checks vehicle stock and confirms eligible orders.	Eligible orders change to Confirmed.
finish	Writes a completion debug statement.	Batch completion is recorded.

The batch does not directly subtract stock. When an order changes from Pending to Confirmed, the existing Vehicle Order Trigger performs the stock deduction.

8.2 VehicleOrderBatchScheduler

VehicleOrderBatchScheduler implements Schedulable and starts VehicleOrderBatch using Database.executeBatch(). This provides periodic automated processing of pending vehicle orders.

8.3 Scheduled Job Evidence

EVIDENCE 5 – Apex Jobs showing VehicleOrderBatch execution

The screenshot shows the Salesforce 'Apex Jobs' page. At the top, there's a 'SETUP' button and the title 'Apex Jobs'. Below this, a link says 'Click here to go to the new batch jobs page'. The main heading is 'Apex Jobs' with a 'Help for this Page' icon. A message states: 'Monitor the status of all Apex jobs, and optionally, abort jobs that are in progress.' Below this, a green banner indicates 'Percent of Asynchronous Apex Used: 0%' with a note that the organization has used 0 out of 250,000 asynchronous operations. A 'View:' dropdown is set to 'All', and there is a 'Create New View' link. The main table lists the following jobs:

Action	Submitted Date	Job Type	Status	Status Detail	Total Batches	Batches Processed	Failures	Submitted By	Completion Date	Apex Class	Apex Method	Apex Job ID
	9/21/2026, 12:04 AM	Batch Apex	Completed		0	0	0	Pirati, Mounisha	9/21/2026, 12:04 AM	VehicleOrderBatch		707bm00001HPShL
	9/20/2026, 12:01 AM	Batch Apex	Completed		0	0	0	Pirati, Mounisha	9/20/2026, 12:01 AM	VehicleOrderBatch		707bm00001H9NOU
	9/19/2026, 12:02 AM	Batch Apex	Completed		0	0	0	Pirati, Mounisha	9/19/2026, 12:02 AM	VehicleOrderBatch		707bm00001GIGJL
	9/18/2026, 5:20 AM	Scheduled Apex	Aborted		0	0	0	Pirati, Mounisha		VehicleOrderBatchScheduler		707bm00001GgGTb

Figure 5. Apex Jobs showing VehicleOrderBatch execution

During project deployment and testing, scheduled and asynchronous jobs were checked in Setup. The project scheduler was also managed to avoid pending jobs interfering with metadata deployment.

9 Lightning App and User Interface

The WhatsNext Vision Motors Lightning App provides a centralized workspace for business users. The navigation exposes the custom objects and analytics required for vehicle sales and service operations.

Business Area	Salesforce Tab
Vehicle Catalogue	Vehicles
Dealer Management	Vehicle Dealers
Customer Management	Vehicle Customers
Sales Orders	Vehicle Orders
Test Drives	Vehicle Test Drives
Service	Vehicle Service Requests
Analytics	Reports and Dashboards

9.1 Recommended Record Evidence

- One Vehicle record showing Vehicle Model, Stock Quantity, Price, Dealer, and Status.
- One Vehicle Order showing Customer, Vehicle, Dealer, Order Date, and Status.
- One Test Drive record showing Customer, Vehicle, Test Drive Date, and Status.

Only one or two representative record screenshots are needed in the final review document. Screenshots of every record are unnecessary.

10 Reports and Dashboard

Reports provide operational visibility into inventory, orders, test drives, and service requests. The dashboard brings the key reports together for management review.

Report	Main Information	Purpose
Vehicle Inventory Report	Vehicle Name, Model, Stock Quantity, Price, Dealer, Status	Monitor vehicle inventory.
Vehicle Orders Report	Order, Customer, Vehicle, Dealer, Date, Status	Monitor sales orders.
Pending Vehicle Orders	Pending orders and related vehicle details	Identify orders waiting for stock/processing.
Test Drive Report	Customer, Vehicle, Date, Status	Monitor test-drive activity.
Vehicle Service Requests	Customer, Vehicle, Service Date, Issue, Status	Monitor service operations.

10.1 Vehicle Inventory Report

The supplied report screenshot demonstrates a Vehicle Inventory Report with columns for Vehicle Name, Vehicle Model, Stock Quantity, Price, Dealer, and Status. This is one of the strongest report screenshots for the project because it shows both inventory and business information in a single view.

EVIDENCE 6 – Vehicle Inventory Report

Vehicle: Vehicle Name	Vehicle Model	Stock Quantity	Price	Dealer	Status
1 SUV	EV	2	\$60,000.00	Mounisha	Available
2		2	\$60,000.00

The WhatsNext Vision Motors Dashboard is configured to provide a centralized summary of the project reports. It brings together operational information for management review. The dashboard was created in Salesforce and can be opened from the Dashboards tab.

11 Functional Testing Evidence

Functional testing verifies both Salesforce configuration and business outcomes. The recommended evidence focuses only on scenarios that demonstrate the project's core functionality.

Test Case	Action	Expected Result	Evidence
Dealer Assignment	Create a Vehicle Order with a customer.	Dealer is assigned automatically.	Order record / Flow result
Stock Available	Create an order for a vehicle with stock.	Order becomes Confirmed.	Order record
Out of Stock	Attempt to confirm an order when stock is zero.	Confirmation is blocked with Apex error.	Order error
Stock Deduction	Confirm an order.	Vehicle stock decreases by one.	Before/after Vehicle record
Order Confirmation Email	Confirm an order.	Customer receives confirmation email.	Email evidence
Test Drive Reminder	Schedule a test drive.	Reminder is sent one day before.	Flow / email evidence
Batch Processing	Execute VehicleOrderBatch with Pending orders.	Eligible orders become Confirmed.	Apex Jobs / records
Report	Run Vehicle Inventory Report.	Vehicle inventory is displayed.	Report screenshot

11.1 Most Important Testing Evidence

- Order status changing from Pending to Confirmed.
- Vehicle stock changing after confirmation.
- Out-of-stock error when confirmation is attempted without stock.
- Test-drive reminder automation.
- Completed VehicleOrderBatch entry in Apex Jobs.

12 Deployment and Version Control

The project was organized as a Salesforce DX project and version-controlled using Git. Salesforce CLI was used for metadata generation, retrieval, and deployment.

12.1 Project Structure

- force-app/main/default/objects – custom objects and fields
- force-app/main/default/flows – project automation flows
- force-app/main/default/classes – Apex classes
- force-app/main/default/triggers – Apex triggers
- force-app/main/default/applications – Lightning application metadata
- manifest – deployment package manifests

12.2 Deployment Approach

8. Create the Salesforce DX project.
9. Authenticate the Developer Edition org using Salesforce CLI.
10. Retrieve only required project metadata.
11. Remove unrelated standard or generated metadata from the project.
12. Create a focused deployment manifest.
13. Deploy the required Apex classes, trigger, custom objects, flows, and application metadata.
14. Verify the deployment result in Salesforce.

12.3 GitHub

The project is maintained in Git and pushed to GitHub so that the Salesforce metadata and project structure can be version-controlled and reviewed.

Repository: WhatsNext-Vision-Motors-Salesforce

The repository contains the Salesforce DX project structure and selected metadata required for the WhatsNext Vision Motors implementation.

13 Conclusion

The WhatsNext Vision Motors Salesforce project provides a practical CRM solution for vehicle sales, dealership, test-drive, and service operations. It organizes vehicle, dealer, customer, order, test-drive, and service data in Salesforce and automates key business processes.

The implementation demonstrates the use of custom Salesforce objects and relationships, Lightning App configuration, record-triggered flows, scheduled paths, email actions, Apex triggers, a trigger-handler pattern, Batch Apex, Scheduled Apex, reports, dashboards, and Salesforce CLI deployment.

The selected evidence demonstrates the complete flow from data model and configuration through automation, Apex processing, testing, and reporting. The documentation intentionally uses only the most relevant screenshots rather than including every development screen.

Key Salesforce Skills Demonstrated

- Custom Object and Field Configuration
- Lookup Relationships

- Lightning App Configuration
- Record-Triggered Flow
- Scheduled Path
- Send Email Action
- Apex Trigger
- Trigger Handler Pattern
- Batch Apex
- Scheduled Apex
- Reports and Dashboard
- Salesforce CLI
- Git and GitHub
- Functional Testing
